

info-point

Public Information - via Smartphone

Provide on-site archaeological information and interpretation to the public and visiting groups via their smartphones.

Self-contained and portable, Info-Point works at any site. It does not need internet connection or mains power. It is compatible with any web-browsing device and incurs no cost to you or the user. The Wi-Fi can be extended by adding wireless network points to cover major sites.

Info-Point runs for a full day on the rechargeable battery, or 24/7 on mains power. You can update content on-site as a dig progresses - text, images, video - just like social media. It can even host your interactive apps, QR codes, and 3D reconstructions.

Info-Point is robust professional kit with a five-year track record at more than 50 heritage sites, including the National Trust, NT Scotland, RSPB and Vindolanda.

For **£3,300 + VAT** (£3,960) the kit includes:

- Info-Point unit
- Rechargeable battery (up to 24 hours operation)
- Mains adapter
- High-reach antenna (250m range)
- Tough storage and transport case
- Waterproof posters informing visitors how to connect
- Built in pre-configured Content Management System
- Instruction manual
- 5 year warranty and email/telephone technical support

Can also be hired - £500 first week, £180 subsequent weeks
